

Evaluation of AVI feasibility

Make the most of your production line with a machine that specifically meets your needs.

Why do you need an Evaluation of AVI feasibility?

If a pharmaceutical manufacturer is manufacturing a product that has been inspected manually up to now and wants to increase its production, it can be helpful to switch to semi-automatic or fully semi-automatic or fully automatic inspection. The same is true for new products that need to be evaluated for how they can be inspected. In order to make the right decision for the right supplier and the right machine, the different options should first be evaluated based on the requirements and the product.

What will be delivered within the project?

As a minimum, a protocol and report will be delivered within the project. The report includes a summary of the machine options with scores for evaluation, while the protocol includes the data. If required, a presentation for the stakeholders can also be delivered. This allows the final decision to be made for a specific supplier and machine based on the desired requirements.

What steps does such a project involve?

Such a project can take up to a maximum of 6 months depending on the scope. During this time, the available machines and the product features are considered and, depending on the complexity of the product, test runs are carried out in order to be able to make an informed decision at the end.

Project components

- Assessment of which automated inspection type (Automated Visual Inspection) should be considered (Semi-, Fully Automated)
- Report with machine options and values for evaluation
- Report with data
- Presentation of the report with stakeholders
- Delivery of decision support for supplier/machine selection

Deliverable: One (1) evaluation of AVI feasibility (max. effort 6 weeks)

Your benefits

Best decision

Make the best decision based on your product and desired requirements from a wide selection of vendors.

Trust

You can rely on our team of experienced pharma technology experts! With years of expertise, we can provide you with the best evaluation advice, so you can trust the outcome.

Peace of mind

Sit back and relax while we successfully complete your projects for you. Benefit from the highest quality without worrying.

Efficiency

Don't waste money on bad decisions and faulty estimates. Go straight to the machine that will put you into production most efficiently.

Time-to-market

We know our machines best. Thanks to our unique Körber Ecosystem synergies, we optimize the process and get you into production faster.
