

PQ execution

Qualification that fully unlocks the potential of your new machine!

Why do you need a PQ?

Legal requirements ensure that pharmaceutical manufacturers are obliged to qualify their process equipment. In particular, after the IQ and OQ, a Performance Qualification (PQ) examines if the machine is fit for its intended purpose and whether it meets the desired requirements. For more complex machines, the PQ must be considered separately from the IQ and OQ, as the effort is greater.

What is delivered within the project?

We can include special requirements based on existing standard documents and thus create the final PQ documents. The tests created are then carried out on the basis of these. The PQ documents are checked for correctness and functionality before execution.

What steps does such a project involve?

The scope of such a project depends on the customer URS and the complexity of the machines. We can include special requirements based on existing standard documents and thus create the final PQ documents. On the basis of these, the created tests are then carried out. At the same time, it is also a good idea to directly add a FAT/SAT support package or a URS. The more steps the consultant is involved in, the more efficiently he can act and accelerate your market entry considerably.

Project components

- Creation of test protocols if needed
- Execution of the PQ
- Documentation of the PQ
- Test reports PQ as official document of proof
- Travel expenses (optional)

Deliverable: one (1) PQ including test protocols and test reportings (based on standard documents) with results

Your benefits

Expertise

You can rely on our team of experienced pharma technology experts! Thanks to years of expertise, we know exactly how to execute IQ/OQ and PQ in the best possible way.

Time-to-market

We know our machines best. Thanks to our unique Körber Ecosystem synergies, we optimize the process and get you into production faster.

GMP compliance

Our experts know the pharmaceutical regulations inside out and ensure that their qualifications keep you GMP compliant at all times!

Peace of mind

Sit back and relax while we successfully complete your projects for you. Benefit from the highest quality without having to worry.

Availability

Our expertise is available to you anytime, anywhere. If needed, we can supply you with an entire team at locations worldwide to qualify your machines.
