

Quality Project Plan

Create the ideal conditions for your project and plan efficiently in advance.

Why do you need a Quality Project Plan?

A Quality Project Plan (QPP) describes the project standard and is required for every new project and every type of new equipment. It is developed on the basis of the Validation Master Plan (VMP) and defines the deliverables, schedule, and workload of a project. In addition, the QPP also includes the required steps, dependencies, and activities related to the quality of the project.

What will be delivered within the project?

One goal of a Quality Project Plan is to provide an accurate overview of the deliverables, efforts, and resources needed to complete a successful project. This includes knowing which parties are involved, how the timeframe is defined, and generally a guideline for the success of the project. We will provide you with a QPP document that defines all of these variables and additional templates if needed.

What are the steps involved in such a project?

The duration is highly depends on the complexity of the project. It can vary from a couple of months to one to two years months to 1-2 years. Hence, the validation master plan is reviewed and based on it a role definition, acceptance criteria and a document overview is written. After a risk assessment, a qualification/validation strategy is developed and reviewed in a workshop with the customer and if necessary the QPP is revised.

Project components

- Check customer's validation master plan
- Creation of initial QPP
 - Definition of roles
 - Acceptance criteria
 - Overview of documents
- Risk evaluation of process
- Qualification strategy (classical vs. agile)
- Workshop
- Revision of the QPP
- Communication with (sub-)suppliers
- Approval / Finalisation QPP
- Travel expenses (optional)

Deliverable: One (1) Approved Quality Project Plan incl. alignment with suppliers

Your benefits

Expertise

You can rely on our team of experienced pharma technology experts! Thanks to years of expertise, we know exactly what is important when developing a Quality Project Plan.

Time-to-market

We have the pharma knowledge. Thanks to our unique Körber Ecosystem synergies, we optimize the process and get you into production faster.

GMP Compliance

Our experts know the pharmaceutical regulations inside out and ensure that you always remain GMP compliant with your qualifications and validations!

Peace of mind

Sit back and relax while we successfully complete your projects for you. Benefit from the highest quality without having to worry.

Availability

Our expertise is available to you anytime, anywhere. If needed, we can supply you with an entire team at locations worldwide to ensure the quality of your projects.
